- Cabinet Doors & Drawer Fronts
- Dovetail Drawers
- Cabinet Face Frames
- Valances
- Custom Fluted Trim
- Wainscoting
- Range Hoods
- Moldings & Sheet Goods
- Accessories
- Finishing Services

Two alternative ways to determine costs . . .

1. Quick, simple toll-free phone call. Most cabinetmakers find the easiest, fastest, and most accurate method is to call one of our helpful Customer Service Representatives. We glean all of your project's pertinent information by asking the right questions and feeding this data into our computer for an exact, error-free quote that we can fax or email to you within 48 hours.

2. Use Precision Wood's Pricing Catalog(s) to develop your project's costs and confirm with us. Some cabinetmakers prefer developing project costs for their customer proposals via published pricing information in our Products and Accessories Catalogs. Naturally, these costs are affirmed and corrected, if need be, when orders are placed or if you review them with us before Proposals are given to your prospective customers. For your added assurance and confidence, we always confirm orders with you to make sure we have each door, accessory, and size correct before releasing them into our production operations.

* There are several basic steps required to figure the cost of Cabinet Doors and Drawer Fronts from our published Price Lists:

- 1. Figure square feet of all doors and cabinet fronts, separately . . .** To determine square feet, multiply the width times height (rounding-up dimensions to nearest inch) and divide by 144.
- 2. Find "Material Charges" and multiply times square feet of doors and drawer fronts, separately . . .** Material charges are in each style section and vary according to wood specie and type of panel selected.
- 3. Add the "Manufacturing Charges" and any additional Options to the "Material Charges" from Step Two . . .** Manufacturing Charges are found at the top of each price grid and are figured as a "per door unit cost" or one unit cost per panel on multiple panel doors.

Remember . . . You can always let us quote any job for you. It's a helpful and free service, even toll-free, that can save you time and guarantee accuracy on prices we commit to. This is especially recommended if your doors have extra-large, non-standard frame part sizes, special panel locations, complicated options, etc.
